TRANSFORMING CUSTOMER JOURNEYS
Playbook

Talent

Capability building

This playbook contains all the pieces and parts that make up our approach to transforming customer journeys. This is a living document and the latest version can be found on TCJ's Confluence site.

Last updated in May 2019

CIMB

How this module fits into overall TCJ Playbook

Table of contents

What capabilities do we need to develop to deliver TCJ?

- **Capabilities required for TCJ**
- How to deliver required capabilities
- Appendix: Detailed skills for key Journey Team leadership roles

There are five types of capabilities that TCJ members should develop

TCJ Development Model

Customer-experience grounding

Ability to design customer-centric experiences throughout customer decision journey

Market orientation

Ability to deeply understand market trends, partner ecosystems, and competitive strategies

Business acumen

Comfort with business strategy, portfolio prioritization, go to market, pricing, and tracking key performance indicator and financial metrics

Technical skills

Ability to go deep on technology trends, architectural questions, stack control points, road maps, and managing development life cycle

Soft skills

Ability to lead teams, communicate with diverse groups, and influence change throughout organization

Each TCJ role will require a separate set of skills across these five capability types

Capability type	Capability	Skills	Description	Product Owner	Navigators	Business Analyst	Scrum Master	Model Office members and Subject Matter Experts	Design (UI, UX)	IT (developers, testers)
Customer-experience grounding	Customer orientation	Need identification	▪ Ability to define a hypothesis of customer need, design an experiment, analyse outcomes and conclude	✓	✓	✓	✓	✓		
		Experience design	▪ Ability to convert customer and colleague needs to personas and design experience journey			✓			✓	
Business acumen	E2E solution design	E2E process mapping	▪ Ability to map current and target state process end-to-end using tools and create					✓		
		E2E operating model design	▪ Ability to apply lean, service excellence principles and customer experience needs to define the future state e2e customer journey and operating model to serve customers				✓			✓
Technical skills	Agile delivery	Agile expertise	▪ Understanding of Agile way of working (incl. Agile@Scale) ▪ Role specific toolkit (e.g., Scrum master/PO)	✓	✓	✓	✓	✓	✓	✓
		Value driven management	▪ Ability to Identify, track and escalate issues/risks and manage performance in an agile environment	✓						
		Team mgmt	▪ Ability to effectively manage teams	✓						
	Digital delivery	Front-end design	▪ Understanding of the UX/UI design capabilities						✓	
		Testing	▪ Knowledge of testing outcomes in a digital environment					✓	✓	✓
	Technology delivery	IT in digital world	▪ Understanding of IT solution design and development in an IT environment (e.g., Sandbox environment)							✓
		Test and scale	▪ Testing skills and industrialization in existing IT environment							✓
Soft skills	Change management	Problem solving	▪ Ability to define the problem statement, break the problem into smaller parts, conducting analyses, synthesis & develop recommendations	✓	✓	✓	✓	✓	✓	✓
		Communication	▪ Ability to make effective presentations (verbal and written) and effectively facilitate team meetings to drive outcomes	✓	✓	✓		✓		
		People leadership	▪ Skills to not only manage self but also to influence decisions, Role model and coach others	✓						

Each TCJ member will build the required skill-sets in their role to achieve higher competence levels

Competence level	1. Beginner	2. Advanced Beginner	3. Competent	4. Accomplished	5. Expert
Competence level definition	• New to role • No specific knowledge on E2E journey transformation or agile • Rigid adherence to rules or processes	• Established TCJ member • Some degree of independence; capable of structuring his or her work and self-learning • More in-depth knowledge on some parts of the tool-kit and approach	• Exemplar • Thorough understanding of the tool-kit and approach • Capable of self-structuring and takes part in advanced training	• Can coach • Recognized expert in his / her field, provides training to other employees, takes part in conferences	• Can lead and steer large group of Journey Team members • Able to act as role model and assist in TCJ training and Journey Team set-up • Leading professional in his/her field worldwide, acts as speaker at conferences
Analogy	**Can buy the right ingredients from a recipe** *(Limited ingredients, starting to learn simple techniques)*	**Can cook a meal using a recipe** *(Able to support others, still with some guidance / instruction)*	**Can host a dinner party for friends with multiple courses** *(Can multi-task cooking, hosting – often using more adventurous ingredients to showcase ability)*	**Can run a kitchen staffed with competent cooks** *(Advanced meals, limited ingredients, simple techniques)*	**Creates innovative new dishes and writes the recipe book for others to follow** *(Invents new cooking techniques)*

Over time, TCJ should outline: (i) the detailed skills required for each role and (ii) what the skills look like at each competency level

TEMPLATE

TCJ Development Model for
Role: _____

	Capability	Skills	Competence levels				
			Novice[1]	Advanced Beginner[2]	Competent[3]	Proficient[4]	Master[5]
Customer-experience grounding	Customer orientation						
Market orinetation	E2E solution design						
Business acumen	E2E solution design						
Technical skills	Agile delivery						
	Digital delivery						
	Technology delivery						
Soft skills	Change management						

Example: TCJ Development Model for Product Owner (1/5)

TEMPLATE

Role: Product Owner

	Capability	Skills	Competence levels: Novice[1]	Advanced Beginner[2]	Competent[3]	Proficient[4]	Master[5]
Customer-experience grounding	Customer orientation	**Under-standing optimal customer experience**	▪ Able to compute analytics and derive insights from them ▪ Can use customer insights to inform the roadmap ▪ Proactively looks at customer-experience data ▪ Able to be hypothesis driven and look at data to diagnose experience-related issues	▪ Beginning to coach and help team execute on customer data ▪ Designs and runs A/B tests ▪ Designs and runs user research opportunities	▪ Proactively organizes teams across products to collect relevant customer insights while product and/or market are evolving ▪ Creates storylines across products to imagine the holistic user experience	▪ Drives CX vision for a small set of products ▪ Provides input on how to structure teams to realize the vision ▪ Designs and aligns organization on storylines across products to imagine the holistic UX	▪ Sets the CX vision for multiple products, including high-level plan to reach that visions ▪ Effectively structures the organization to realize the vision ▪ Inspires stakeholders to bring them along with and get their buy-in for the vision
		Collaborating with design teams	▪ Can coordinate and discuss high-level needs with design team ▪ Helps design team to incorporate telemetry and feedback features into product design	▪ Regularly works alongside design team to merge customer insights with best design practices	▪ Pushes design teams to design with suite of products and features in mind, not for individual solutions	▪ Begins building relationships with design leaders, drives alignment on goals and manages design capacity	▪ Jointly plans with design leaders to ensure that there is adequate support to realize product development goals for the year

Example: TCJ Development Model for Product Owner (2/5)

TEMPLATE

Role: Product Owner

	Capability	Skills	Competence levels: Novice[1]	Advanced Beginner[2]	Competent[3]	Proficient[4]	Master[5]
Market orientation	E2E solution design	Market & trends	▪ Regularly reviews and understands product market and trends effecting it	▪ Has a view on the evolution of the product's market and the trends affecting it and preemptively plans around it	▪ Understands markets for a variety of products and the trends affecting them ▪ Guides teams to effectively prioritize and adapt	▪ Can organize and respond to market shifts that affect multiple products to maximize benefit across all products	▪ Develops market theses and is regarded as a thought leader ▪ Structures organization and adapts market vision as necessary to take advantage of market trends
		Competition	▪ Knows the competitors, how their products differ, and what they are doing	▪ Anticipates competitor moves and acts accordingly to precede them	▪ Is familiar with competitors of multiple products and can anticipate their moves ▪ Demonstrates cross-product thinking to have a view on which competitors are likely to enter new markets	▪ Has a view on which non-competitor companies are likely to become competitors in the next 5 years ▪ Organizes teams to effectively compete with competitors	▪ Strategically plans for entrance of new competitors across product industries 5+ years away ▪ Structures organization and tactically hires to be competitive
		Ecosystem	▪ Understands the product ecosystem and can speak to it	▪ Understands the product ecosystem and can speak to it	▪ Defines the product ecosystem in a broader sense and can communicate it to stakeholders	▪ Defines the product ecosystem in a broader sense and can communicate it to stakeholders	▪ Participates in fora to share thought leadership and helps drive direction more holistically

Example: TCJ Development Model for Product Owner (3/5)

TEMPLATE

Role: Product Owner

	Capability	Skills	Competence levels: Novice[1]	Advanced Beginner[2]	Competent[3]	Proficient[4]	Master[5]
Business acumen	E2E solution design	Strategy	▪ Has a clear product/feature strategy with appropriate metrics ▪ Regularly pulls product KPIs	▪ Proactively adapts strategy to continually improve ▪ Regularly pulls the right product KPIs and knows how to use them most effectively	▪ Develops cross-product strategies to effectively grow all products ▪ Knows which are the most meaningful metrics to pull across products to drive insights	▪ Cross-product strategies leverage products as a channel ▪ Get buy-in from your teams on product strategies ▪ Clearly articulates strategies and the pros and cons of each option	▪ Defines multi-product strategies and articulates their interconnectedness ▪ Aligns cross-functional teams on product strategies
		Go-to-market	▪ Works with GTM teams to effectively launch products	▪ Develops GTM strategy and coordinates with appropriate GTM teams to achieve it	▪ Develops multiple GTM strategies across products and can discuss implications ▪ Effectively works alongside GTM team leads to optimize strategies for success	▪ Develops multiple GTM strategies across products and can discuss implications ▪ Align with GTM org and product org, able to start removing roadblocks	▪ Quickly and effectively aligns with GTM org and product org to remove roadblocks and bring the best of both teams
		Prioritization & planning	▪ Uses data and feedback to prioritize the correct features	▪ Formulates feature prioritization list and plan to achieve them ▪ Creates new features that combine data from feedback sources	▪ Anticipates new features across products and effectively prioritizes them to maximize retention and growth	▪ Plans teams around feature and product development to anticipate needs	▪ Structures organization and hires/promotes key leaders to align strategy with product development needs

Example: TCJ Development Model for Product Owner (4/5)

TEMPLATE

Role: Product Owner

	Capability	Skills	Competence levels: Novice[1]	Advanced Beginner[2]	Competent[3]	Proficient[4]	Master[5]
Technical skills	Digital delivery	**Under-standing the technology landscape**	▪ Can speak to the technology used in their product	▪ Can speak to the technology used in their product and has a view on what new technologies can affect it	▪ Can speak confidently about the technology used in each product and the benefits and drawbacks associated with them ▪ Considers alternative technologies for products and successfully changes when necessary	▪ Plans for emerging technologies and their effect on products ▪ Can articulate technology trends affecting company products and why or why the company is adopting, investing, etc. in them	▪ Structures organization and strategically hires to adapt and take advantage of emerging technologies when appropriate ▪ Is a thought leader on the technology landscape affecting their products
		Working with engineering to build and ship products	▪ Effectively works with engineering team to build and ship features with few bugs	▪ Effectively works with engineering team to build and ship products with few bugs	▪ Anticipates roadblocks in development and roadmaps accordingly to keep projects on-time and in scope	▪ Engages with engineering leads to plan for upcoming products and features	▪ Coordinates with engineering directors to help them structure their organizations based on product development needs

Example: TCJ Development Model for Product Owner (5/5)

TEMPLATE

Role: Product Owner

	Capability	Skills	Competence levels: Novice[1]	Advanced Beginner[2]	Competent[3]	Proficient[4]	Master[5]
Soft skills	Change manage-ment	**Effective communication**	▪ Clearly articulates their theses, questions, strategies ▪ Structures their communication	▪ Writes clear and concise business cases for products/features ▪ Clearly communicates needs and deliverables to teams	▪ Is able to lead and present for small-to-medium speaking engagements	▪ Effectively presents at large events	▪ Effectively presents at large events
		Leadership & influence	▪ Works positively with development, design, and other teams ▪ Gives structured upward feedback	▪ Leads teams efficiently and effectively	▪ Inspires and empowers product teams ▪ Mentors lower-tenured POs	▪ Gets teams excited about new products and services ▪ Actively mentors and guides several core mentees	▪ Effectively leads and inspires people across the organization and company
		Team building	▪ Positively contributes to team atmosphere	▪ Demonstrates care and concern for team members ▪ Promotes team morale	▪ Fosters good working environments and effectively organizes teams	▪ Structures teams in the most effective and efficient manor	▪ Hires and structures the organization appropriately, considering strategies and goals
		Entrepreneur-ship	▪ Thinks of creative ways to solve problems, strategize, and/or create new features	▪ Develops new solutions and features and formally proposes them	▪ Develops new product offerings and formally proposes them	▪ Seeks new ways to apply product technologies to other industries	▪ Conceptualizes new industries and products to create for those industries

Table of contents

What talent and capabilities do we need to deliver TCJ?

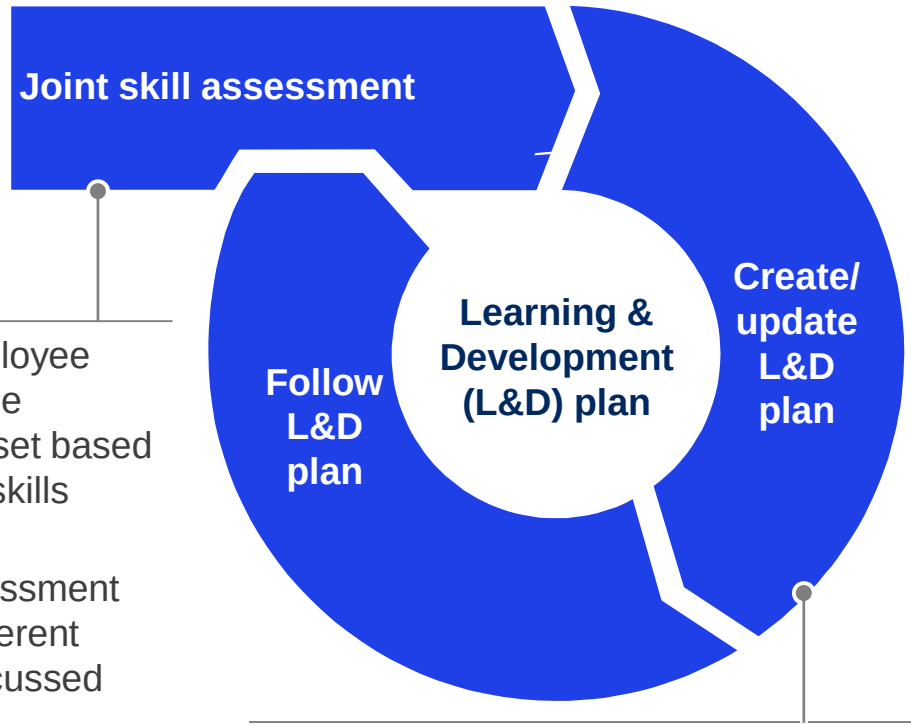
- Capabilities required for TCJ
- **How to deliver required capabilities**
- Appendix: Detailed skills for key Journey Team leadership roles

TCJ and CIMB People Division would help TCJ members build the capabilities required over a learning journey

		Activities	Goal
1	**Feedback & Assessment**	Skills assessments	Continuously identify learning and development goals and create/update a learning and development plan to achieve them
		Informal feedback	Create informal feedback culture where any appropriate moment can be used to give feedback
		Performance management	Assess performance based on 360 degrees feedback with focus on development
2	**Classroom learning**	External conferences/meetups	Learn from external organizations and raise public profile
		Training academy	Offer soft and hard skills courses for all needs identified by Chapters
3	**Role-based Coaching**	On-the-job coaching	Teach people new to their role by watching and working alongside experienced practitioners, e.g. pair programming in case of developer
		1:1 coaching sessions	Set up regular growth-focused sessions with experienced practitioner (outside of skills assessment, feedback or performance management)
4	**Community**	Knowledge sharing sessions among same role	Share knowledge and best practices between between people with same role (e.g., Journey Team leads)
		Chapter meeting	Share knowledge and best practices within a Chapter
		Informal brown-bag sessions	Share knowledge between all Journey Team members, regardless of role, in an informal way
		Peer-to-peer support	Create peer-to-peer support culture where peers actively seek to help each other

1. Regular skill assessment is the basis for an effective learning and development journey

Learning & development process



- Coach and employee jointly assess the employees skillset based on pre-defined skills matrices
- During the assessment progress on different elements is discussed

- The learning and development plan is created / updated based on the assessment
- Should define clear actions for:
  - classroom learning
  - community-based learning
  - coaching expectations

Coaches for L&D process

Role	Coach
▪ Squad member ▪ Product owner	▪ Chapter Lead ▪ Journey Lead and Agile Coach
▪ Chapter Lead ▪ Agile Coach ▪ Journey Lead	▪ Agile Coach ▪ Senior Agile Coach ▪ Experienced Journey Lead or senior Agile Coach or Head of TCJ

1. Informal feedback culture is fostered through five actions; and will create an empowering environment

What to do	How to do it
Differentiate between **observation** and **judgment**	State observation and describe how that made you feel and why, don't just state the feeling
Differentiate between **development-** and **evaluation-driven** discussions	Make sure the conversation is constructive and provides suggestions for development and is not just judging
Achieve a balanced ratio of **appreciation** to **suggestions for improvement**	Highlight strengths and development opportunities in balanced number
Encourage **peer-to-peer** and **upward feedback**	Actively encourage Journey Team members to provide and ask for feedback across all roles in the Journey Team including leadership
Reinforce the feedback culture through **institutionalized** and **informal** mechanisms	Provide platforms and free up time for feedback, make it a part of the development and evaluation plan and provide proper training

SAMPLE

2. Training academy should tailor programs for different tracks and competence levels, allowing Journey Team members to continuously develop their core skills

Hard skills
Soft skills

Competence level	Novice	Advanced Beginner	Competent	Proficient	Master
Craftsman-ship & people development track	Hackathons to introduce new platforms (e.g. Microservices)				
	Internal trainings to ramp up system knowledge		Scrum master certification	Developer conferences to keep track of innovations	
	Pair programming sessions with senior team members & code feedback		Soft skill training (e.g. presentation skills, giving feedback)	Leadership seminars	
	Agile boot camps to get broaden knowledge about agile WoW				
	Access to online learning platforms to increase T-shapeness (e.g. Code school, Team Treehouse) and internal code challenges (e.g. http://nodebots.io)				
Business ownership track		Video repository on digital literacy (Technology Basics, Power of Digital)		Inspiration sessions (company visits, keynote speakers, off-sites)	
		Business seminars on Bank trends & products		Industry conferences	
		Online courses on PO specific skills (agile 101, PO essentials, MVP creation)	Soft skill training (e.g. presentation skills)	Leadership seminars	

SAMPLE

2. The overall learning catalog should be exhaustive in the sense that all skill gaps can be addressed through classroom learning

Mindset	Theory	Execution				
Awareness Why change, mindset & behaviours	**Fundamentals** Principles for success	**Journey Team leadership** Discover value	**Product design** Define value	**Coaching** Deliver value	**Technical excellence** Assure quality	**Self-Mastery & Soft Skills**
Why Agile? When do I need Agile? (and when not)	**Deliver value early and often** MoSCoW, incremental value delivery	**Impact mapping** Rapid visioning, road mapping and triaging of Ideas and options	**Design thinking** Ensuring designs are viable, desirable	**Team kick-offs** Working agreements, design alliances, Tuckman's stages	**Test first strategy** Increase code quality using TDD	**Speaking in public**
Agile overview How Agile works, and addresses our challenges & opportunities	**Optimize flow to deliver faster** Limit work in progress	**Discovery Kanban** Validating and prioritizing by ROI	**Service design** Optimizing the customer and company journeys	**Facilitation 101** Tools and techniques for facilitating great meetings	**Pair programming** Techniques and practical experience	**Active listening**
Thinking differently 10 questions to start and stop asking, how to experiment	**Quality through fast feedback** Do it right	**Value stream mapping** Analyzing and improving e2e lead time and flow	**Zero-based design** Reimagining how to service the customer	**Agile Ceremony Facilitation** Deep dives into how to facilitate retros, planning and dailies	**Agile testing** Principles to help break down Dev/Testing walls	**Peer-to-peer feedback**
Science of change Psychology of changing mindsets	**Scrum 101** Scrum framework fundamentals	**Agile metrics** How and why to measure value, flow and quality	**Personas** Knowing your customer	**Coaching conversations** Contracts, the GROW model	**Behavioral driven development**	**Growth mindset vs fixed mindset**
Inspiring motivated employees in an Agile setting Promote intrinsic motivation	**Kanban 101** Kanban framework fundamentals	**Prioritisation** Cost of delay & balanced score cards for prioritization	**Splitting work** How to make break down work by value	**Visualizing work in progress** Boards, cards, signals	**Domain driven development**	**Resilience**
	Scaling Agile A@S framework awareness	**Tools** Collaboration, communication coordination, monitoring & reporting	**User story mapping** Scoping and scheduling	**Systems thinking**		**Self-direction / taking responsibility**
	DevOps 101 DevOps mindset, practices and technologies	**Business model design** Value proposition and business model canvas	**User story writing** Specifying requirements and BDD			**Servant leadership**
		Lean budgeting How to fund portfolio , programmes and teams	**Product canvas** Combine Agile & UX for user-centered designed			
		Product release planning and roadmapping Scheduling product releases	**Event storming** Designing product based on commands & events			
		Dependency Management Guidance on how to manage internal & external dependencies	**AB testing** Scientific testing to find winning ideas			
			Jobs to be done & 4C's			

Ongoing growth & development modules are jointly chosen by the senior coach / chapter lead & Agile Coach, based on skills matrix and learning interests

3. On-the-job coaching by an experienced coach of the same role is an effective way of seeing what good looks like, receiving the right feedback

An experienced coach/practitioner can effectively share his/her experience in two ways:

On-the-job coaching

Coachee shadows practitioner	Coachee and practitioner jointly do the work	Coachee does work alone
▪ The experienced practitioner does the work ▪ Coachee shadows experienced practitioner to observe ▪ Coachee and experienced practitioner regularly discuss the way of working	▪ Coachee and experienced practitioner co-execute the role ▪ Coachee gradually does more and more of the work without assistance ▪ Experienced practitioner helps where necessary ▪ Regular feedback	▪ Coachee executes job without assistance ▪ Experienced practitioner intervenes if necessary ▪ Experienced practitioner observes and regularly provides feedback

Examples of on-the-job-coaching activities for the different roles are:

- Pair programming for developers
- Jointly refining a backlog for product owners
- Co-facilitating a retrospective for Agile coach

1:1 coaching sessions

- Set up regular 1:1 coaching sessions to discuss problems and best practices
- Ideally, takes place 1-4 times a month
- Also used to reflect on learning goals

Note that who the coach/experienced practitioner is varies per role, e.g. for a developer it will be the Chapter lead, for the Journey Team lead it will be another Journey Team lead or a senior Agile coach

4. Community-based knowledge sharing and coaching among peers is an effective way to develop each other's skills

Chapters and peers play key roles in the development process

Knowledge sharing sessions	▪ Conduct knowledge sharing sessions between people with the same role, e.g. two or more Journey Team leads ▪ Set up regular slots e.g. monthly to discuss problems, best practices and how to best achieve an individuals' learning goals
Chapter meeting	▪ Conduct regular Chapter meetings to discuss problems and best practices within the context of the Chapter ▪ Opportunity to coach peers and receive coaching from peers ▪ Ideally bi-weekly cadence
Informal brown-bag sessions	▪ Conduct regular lunch meetings organized by the Chapters to discuss topics of interest and share experiences ▪ Brown-bag sessions are also open to anyone outside the Chapter that is interested
Peer-to-peer support	▪ Actively apply on-the-job support for peers in a constructive way ▪ Shadow each other and share observations to identify strengths and development areas

Table of contents

What talent and capabilities do we need to deliver TCJ?

- Capabilities required for TCJ
- How to deliver required capabilities
- **Appendix: Detailed skills for key Journey Team leadership roles**

Example: TCJ Development Model for Design Lead (1/4)

TEMPLATE

TCJ Development Model for
Role: Design Lead

Competence levels

Novice[1] | Advanced Beginner[2] | Competent[3] | Proficient[4] | Master[5]

	Capability	Skills
Market orientation	**Deep insight into business and products**	▪ Knows (lives) the business ▪ Deep knowledge of business project and understanding of underlying products
	Ability to define and shape the target-state vision, deconstruct high level concepts and reconstruct them into a holistic service design blueprint	▪ Has clear vision on end-state ▪ Ability to communicate value/impact of elements of end-state design ▪ Understanding of how solution gets delivered ▪ Ability to see clear interlinkages between conceptual elements of a solution
	Ability to define strategic roadmap	▪ Understanding of the programme and business context ▪ Ability to prioritise solution elements and translate them into transition states ▪ Ability to prepare structured plans ▪ Ability to define of transition states required to deliver end-state
	Ability to integrate different perspectives by bringing multi-disciplinary insights	▪ Understanding of service design ▪ Understanding of technical landscape ▪ Ensuring the solution contributes to business objectives ▪ Ensuring replicability and scale-up feasibility of solutions ▪ Integrating key elements of customer experience discipline
	Ability to navigate organisation and manage senior stakeholders	▪ Working relationship with the stakeholders ▪ Knowledge of key stakeholders

Example: TCJ Development Model for Design Lead (2/4)

TEMPLATE

TCJ Development Model for
Role: Design Lead

Competence levels

Novice[1] | Advanced Beginner[2] | Competent[3] | Proficient[4] | Master[5]

	Capability	Skills
Customer-experience grounding	**Obsession with solving customer needs**	▪ Builds for real needs – understand and cater to what customers really want ▪ Is open-mind about what is possible to come up with the best solution ▪ Lives and breathes customer pain points and opportunities
	Passion and commitment for optimising end-to-end client experience	▪ Champions the customer and keeps the customer front-of-mind ▪ Thinks big-picture and about adjacent opportunities and touch-points ▪ Strives to maintain a holistic view of product and ensures that the end-to-end experience is strong
	Desire and ability to stay close to the customer through surveys, focus groups, user interviews, and market analysis	▪ Collects and reviews adoption and usage of statistic (surveys, focus groups, user interviews, market analysis) ▪ Ensuring constant integration of customer insights into current solution thinking
	Experience with conducting user research and usability testing	▪ Understanding of user research methodology ▪ Ability to listen actively and having a sense of empathy ▪ Ability to interpret observations ▪ Understanding of audience – their needs and reasoning
	Experience with designing consumer quality products that enable business and customer objectives through technology	▪ Ability to interpret and integrate customer feedback into design actions ▪ Understanding of business context and how the customer-centric solution fits in ▪ Understanding of technological aspects of the solution

Example: TCJ Development Model for Design Lead (3/4)

TEMPLATE

TCJ Development Model for
Role: Design Lead

Competence levels

Novice[1] | Advanced Beginner[2] | Competent[3] | Proficient[4] | Master[5]

	Capability	Skills
Technical skills	**Deep knowledge and experience of Agile software development process**	▪ Demonstrates proactivity and sense of ownership ▪ Ability to make incremental changes based on ongoing iterations that are translated into constant delivery ▪ Ability to break issues down into small pieces
	Command of transformation methodology	▪ Knowledge of service Excellence, E2E solution design, and ▪ systems thinking ▪ Knowledge of Agile way of working ▪ Knowledge of definition of ready/done ▪ Knowledge of digital delivery capabilities, including UX/UI design, front-end design, and development and testing ▪ Knowledge of service and customer experience design ▪ Knowledge of technology delivery capabilities, including how to engage on enterprise architecture, workflow design and implementation, and how to support development, testing, and integration
	Rigour in execution and attention to detail	▪ Ability to translate vision into specific deliverables and break down tasks into discrete pieces ▪ Ability to manage demand and supply ▪ Ability to plan and track delivery ▪ Ability to resolve issues ▪ Ability to deliver products from start to finish
	Structured thought leadership	▪ Decisiveness: knows when to say “no” ▪ Ability to make decisions ▪ Ability to lead structured problem solving sessions ▪ Ability to communication clearly across teams and stakeholders, and describe product strategy in a clear, crisp and articulate way

Example: TCJ Development Model for Design Lead (4/4)

TEMPLATE

TCJ Development Model for
Role: Design Lead

Competence levels

Novice[1] | Advanced Beginner[2] | Competent[3] | Proficient[4] | Master[5]

	Capability	Skills
Soft skills	**Ability to influence people and strong negotiation skills**	▪ Persuades stakeholders and team ▪ Feels fully empowered to make all decisions regarding his/her domain ▪ Manages competing stakeholder priorities ▪ Understands technical trade-offs that must be made to achieve desired features
	Goal orientation, pro-activeness, and passion	▪ Challenges status quo and drives changes as required ▪ Gets things done by being proactive ▪ Drives work efficiently and spends time on the right things ▪ Sets challenging and ambitious goals and drives to achieve them
	Openness, collaboration, and caring	▪ Is an integral part of the team ▪ Seeks and incorporate feedback ▪ Facilitates trust and collaboration
	Entrepreneur-ship and innovation	▪ Focuses on business impact and comes up with actionable recommendations ▪ Influences others in driving the change when needed ▪ Seizes opportunities to come up with ideas and helps improve the solution ▪ Acts and delivers balancing risk and ambition effectively
	Directness and commitment to delivering high quality solution	▪ Sets clear expectations and holds team and self to high standards ▪ Ability to clearly communicate ▪ Demonstrates E2E ownership ▪ Fosters an open, blame-free culture ▪ Rigour in work and proactive identification and resolution of impediments

Design Lead role-specific capabilities assessment

Have your Design Lead assess their current level of capability and identify their biggest gaps using the survey to inform their development plan and learning journey

	I demonstrate:	This does not describe me at all	I demonstrate this from time to time, but can improve a lot	I demonstrate this most of the time	This is one of my core strengths and I demonstrate it nearly of all the time
Product builder	Deep insight into business and products				
	Ability to define and shape the target-state vision, deconstruct high level concepts and reconstruct them into a holistic service design blueprint				
	Ability to define strategic roadmap				
	Ability to integrate different perspectives by bringing multi-disciplinary insights				
	Ability to synthesize and provide stakeholders with coherent story and design overview				
	Ability to navigate organisation and manage senior stakeholders				
Customer ambassador	Obsession with solving customer needs				
	Passion and commitment for optimising end-to-end client experience				
	Desire and ability to stay close to the customer through surveys, focus groups, user interviews, and market analysis				
	Experience with conducting user research and usability testing				
	Experience with designing consumer quality products that enable business and customer objectives through technology				
Design Manager	Deep knowledge and experience of Agile software development process				
	Command of transformation methodology				
	Rigour in execution and attention to detail				
	Structured thought leadership				
People leader	Ability to influence people and strong negotiation skills				
	Goal orientation, pro-activeness, and passion				
	Openness, collaboration, and caring				
	Entrepreneur-ship and innovation				
	Directness and commitment to delivering high quality solution				

Example: TCJ Development Model for Scrum Master (1/4)

TEMPLATE

TCJ Development Model for
Role: Scrum Master

Competence levels

Novice[1] | Advanced Beginner[2] | Competent[3] | Proficient[4] | Master[5]

	Capability	Skills
Market orientation Organisational Navigator: Navigates organisation to unlock roadblocks and ensure on-time and on-budget delivery	**Ability to navigate organisation and manage senior stakeholders to quickly remove roadblocks to delivery**	▪ Ability to proactively identify and resolve delivery impediments ▪ Has a deep understanding of the stakeholders, organisation, and processes ▪ Knows quickest route to escalate and remove roadblocks
	Ability to escalate issues to stakeholders when needed (fearless navigator)	▪ Ability to resolve conflicts when needed ▪ Has the courage to articulate issues emerging from delivery and to ask for help ▪ Focuses on resolution of issues
	Ability to clearly articulate challenges, solution trade offs, and asks to leadership	▪ Understands inputs required by audience to make decisions ▪ Clear understanding of the programme and business context ▪ Ability to clearly communicate upwards
	Deep insight into business and products	▪ Knows (lives) the business ▪ Deep knowledge of business initiatives and strategy ▪ Understanding of underlying products

Example: TCJ Development Model for Scrum Master (2/4)

TEMPLATE

TCJ Development Model for
Role: Scrum Master

Competence levels

Novice[1] | Advanced Beginner[2] | Competent[3] | Proficient[4] | Master[5]

	Capability	Skills
Customer-experience grounding	**Commitment to delivering high quality solution**	▪ Fosters an open, blame-free culture ▪ Rigour in work and proactive identification and resolution of impediments ▪ Role models “can-do” attitude
	Ability to collaborate with design to ensure delivery of a solution	▪ Represents one-team mentality ▪ Is energised by solving problems with the team ▪ Focuses on delivery of a solution
	Strong process orientation	▪ Ability to structure work ▪ Follows clear set of defined and repeatable processes
	Ability to plan and prioritise	▪ Understanding of what needs to happen to make the Lab successful ▪ Ability to foresee challenging circumstances and adjust plan accordingly
	Ability to maximise performance of delivery teams	▪ Builds a strong sense of trust and support ▪ Nurtures a culture of transparency ▪ Understands principles of effective performance management
	Rigour in execution and attention to detail	▪ Ability to translate vision into specific deliverables and break down tasks into discrete pieces ▪ Ability to manage demand and supply ▪ Ability to plan and track delivery ▪ Ability to resolve issues ▪ Ability to deliver products from start to finish
